

Setup POP3 and IMAP Email

Typically, the email services that require POP3 or IMAP account services will be setup automatically when Next is selected after entering an email address and password.

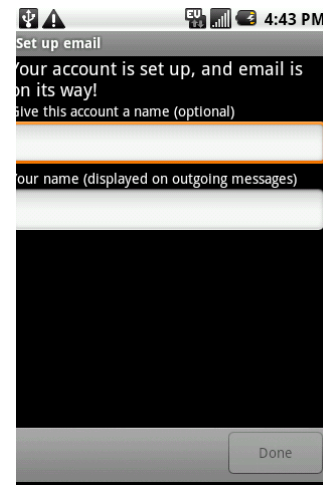

Tap
Email.

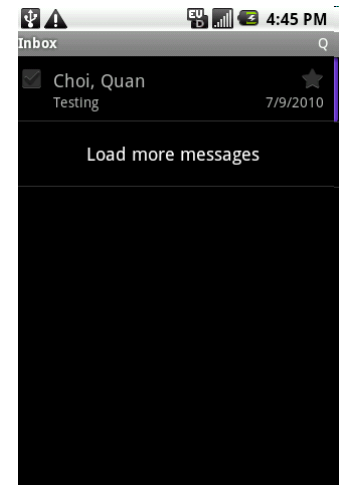

Enter
email address
and password.

Name the account.
Enter name for
outgoing messages.

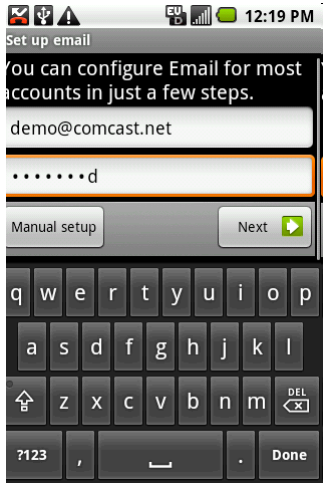

Email setup
is complete.

Setup POP3 and IMAP Email

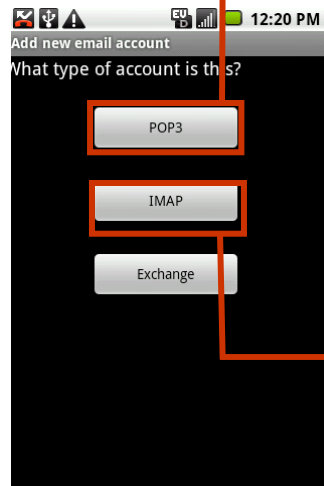

If the automatic setup does not detect your email account, continue with the following steps:

Enter email address and password.

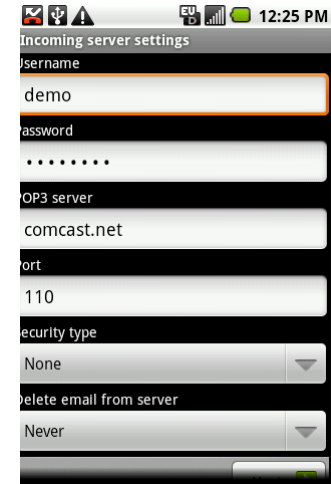

If Next is tapped and the email settings are not automatically detected, this screen displays.

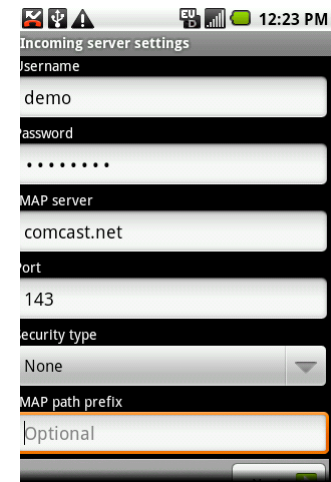

Tap appropriate account type.

Enter settings provided by Internet Provider.

Tap Next at the bottom of each screen.

NOTE: The customer must get their email server settings from the ISP.

If after tapping **Next** and a message is received that the device was unable to open a connection the customer must contact their ISP Support.
