Portable Wi-Fi Hotspot

The Portable Wi-Fi Hotspot allows the Galaxy S Aviator to share its data connection with up to five other devices via Wi-Fi. The Galaxy S Aviator acts as a wireless modem to connect a PC and/or other device to the wireless data network. A Tethering data package is required for Portable Wi-Fi Hotspot usage. Please contact your carrier for more information.

1. From the Home screen press Menu > Settings > Wireless and Networks > Portable Wi-Fi Hotspot.

2. Touch Portable Wi-Fi hotspot.

3. Touch Accept.

4. This device now acts as a Wi-Fi Hotspot. Up to 5 devices can be connected to this device’s Wi-Fi Hotspot network. Touch Network Settings to configure the Hot Spot.

5. Touch Configure.

7. The settings used for the Portable Wi-Fi Hotspot can be changed from this screen. Note: The default password is the user’s phone number.
**Tethering**

Tethering allows the Galaxy S Aviator to share its data connection with a PC using a USB cable. The Galaxy S Aviator acts as a modem to connect a PC to the wireless data network. A Tethering data package is required for usage. Please contact your carrier for more information.

1. Connect the USB cable that came in the box to the phone and the computer. From the Home screen press **Menu > Settings > Wireless and Networks**.
2. Touch **Tethering**.
3. Touch **USB tethering** to start the service.
4. Review Introduction for Tethering, then touch **Ok**.
